

## HelioBrush®

The new polishing media

With the HelioBrush® presents Daetwyler Graphics a new treatment of the surface of copper cylinders. A unique tool to achieve predictable, stable and controllable results independent from circumference and size of cylinder. The result gives a well-compact homogeneous surface due to closer Rz and Rmax values.

### Your advantages

- Better print results due to less likelihood for hazing with higher roughness values
- Long life time
- Less stone usage = less sludge = less filter usage
- The usage of the paperband head for crosshatch pattern no more needed
- No loss of Rz value once chrome coated ( $R_z$  in Cu =  $R_z$  in Cr)
- Roughness can easier be changed by numbers of strokes

| No. of strokes                 | 6   | 12  | 18  | 24  | 30   |
|--------------------------------|-----|-----|-----|-----|------|
| Roughness Rz [ $\mu\text{m}$ ] | 0.6 | 0.5 | 0.4 | 0.3 | 0.25 |

Example: started with Rz 0.7 (after using stone)

### How to order

Art. 600844

HelioBrush®

### **How to get the new HelioBrush® on your machine?**

- A retrofit is available for any FINISHSTAR P-1610 CU or FINISHSTAR P-1610 CU/CR built since 2009

### **Scope of upgrade**

- Planetary gear
- Splash guard
- Optimized grinding program adapted to your needs
- Training by technician

### **How to order**

Contact us for more details. We will gladly work out a quotation with you, based on your needs.
