

## HelioFace R-CUT

### Rotatable round face cutting plate for CFM

As an alternative to the standard HelioFace T-CUT, we have introduced the HelioFace R-CUT (round face cutting tool) for all CFM models. This rotatable tool can be used up to 10 times and thus reduces process costs and changeover times to the maximum possible extent. Existing CFM machines can also be upgraded to this system.

#### Features

- Long tool life – 1 tool can be used up to 10 times
- Best price-performance ratio – Lower tool costs
- Quick changeover – NO calibration time
- Highly precise cylinder surfaces
- Very high parallelism – Optimal ink transfer
- Finest surface structure – Reduced stone consumption

#### Our recommendation

Along with the face cutting tool, we can additionally supply side processing tools. The Side Processing Plate is used to process cylinder sides, angles and the tapers on the cylinder face.

#### Order numbers

##### Face Cutting

601156	HelioFace R-CUT
143282	Spacer

##### Side processing

207622	Side Processing Plate (10 pieces/box)
200577	Carbide Spacer (10 pieces/box)

##### Accessories

207623	Torx Screw M3,5
128403	Spacer Screw
